FSET to GND = use PWM input frequency directly

R_ISET:
 $I_{LED} = (\text{CURRENT}/4095) \times \text{IMAX} \times (24,000 / R_{ISET})$
 CURRENT is the I2C settable fraction, so just set to 4095.
 We want IMAX = 40mA.
 IMAX = 50mA with 24K R_ISET
 Current is effectively $1200\text{A} / R_{ISET}$
 So for IMAX = 40mA, we want:
 $0.04\text{A} = 1200\text{A} / R$
 $R = 1200\text{A} / 0.04\text{A}$
 $R = 30\text{k}$
